

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

and subspecies. Icteridae have added to them two subspecies. The Troglodytidae have no additions, but a species already described is more accurately defined, and the several species are rearranged and their distribution outlined. L. J.

REPORT OF THE MASSACHUSETTS AUDUBON SOCIETY, for the Protection of Birds, 234 Berkeley Street, Boston, Mass.

This active society for the protection of birds numbers 5362 members, only 1076 of whom are under sixteen years of age. From this it will be clear that the people of Massachusetts are in earnest about the protection of their native birds. Their activity is well evidenced by the annual expenditures, which run all the way from \$1,225.00 to \$1,952.00. From this report we discover no evidence that the movement is in any way an hysterical one, but rather a sober effort to accomplish a much needed reform in the popular attitude toward the birds. We are also pleased to note that in the United States outside of Massachusetts there are twenty-seven state societies endeavoring to do the same work. While the nature of our scientific work with the birds debarrs us from taking the ironclad Audubon pledge, we can nevertheless heartily endorse the object of the Audubon organization. L. J.

NORTH AMERICAN FAUNA, No. 22, By Edward A. Preble, Assistant Biologist, U. S. Department of Agriculture. October 31, 1902.

Among the contents of this number we find an annotated list of the birds of the Hudson Bay region. The whole number is devoted to an account of an expedition fitted out for a biological exploration of this region by the Biological Survey, in 1900. The birds listed number 260 species and subspecies, representing all that is known for the region to the close of the expedition. This indicates the richness of the region and the possibilities open to one who might spend several years on the ground. Lists of the Mammals and Batrachians are also given. L. J.

LIST OF BIRDS COLLECTED BY WILLIAM T. FOSTER IN PARAGUAY. By Harry C. Oberholser. From the Proceedings of the U. S. National Museum, Vol. XXV, pages 127-147, No. 1281.

This collection, though small, is of more than usual interest. It consists of 78 specimens, representing 65 species and subspecies, several of which appear to be heretofore unrecorded from Paraguay. The descriptions of four species and three subspecies are here given. The annotations are almost wholly descriptive of the birds. L. J.

BIRDS COLLECTED BY DR. W. L. ABBOTT AND MR. C. R. KLOSS IN THE ANDAMAN AND NICOBAR ISLANDS. By Charles W. Richmond, Assistant Curator, Division of Birds. From the Proceeding of the United States National Museum, Vol. XXV., pages 287-314, No. 1288.
